Projects

GPUCheck

Static GPU Performance Analysis

GPUCheck detects GPU performance problems like non-coalescable memory accesses and divergent branches through LLVM analysis. GPUCheck improves benchmark performance up to 25%, and can be integrated into the build process of any GPU executable compiled using LLVM.

Wedding RFID

Tracking/Guidance for Guests

Guests are issued an RFID tag, used at terminals throughout the event. Tags are tied to guests by web API, while touchscreens and RFID sensors allow interaction. The terminals allow sign-in, direct guests to seats, and track engagement.
